Kurt Foster

541-231-8228 • fostkurt@gmail.com

My passion is designing, building, testing and repairing complicated devices. Enabling a complex machine to come to life is at the core of what drives me through difficult tasks. I have four years of hands-on electromechanical experience, plus a two-year industrial automation technology degree.

WORK EXPERIENCE

Repair and Maintenance Technician *Aug 2023 - Dec 2023 • 5 mos*

Short-term Contract with HP Inc. [Corvallis, OR] Full-time

- First responding troubleshooter diagnosing a wide variety of electromechanical issues
- Determining root cause analysis of circuitry, control panels, and mechanical systems
- Editing and troubleshooting PLC ladder logic and command language programs
- Interpreting mechanical drawings, schematics, printouts, specifications, and test procedures

Automation Systems Technician *Mar 2021 - Jul 2023 • 2 yr 5 mos*

Automated Hydroponic Technologies, ABN [Corvallis, OR] Full-time

- Testing components at an individual level, keeping track of performance measured
- Translating custom PTC Onshape CAD to real world results, and constant iteration through the issues
- Continuous improvement of design, as it progresses from test bed to prototype
- Updating PLC logic and microcontroller code for component testing, and associated wiring changes
- Creating accurate analysis of data recorded, in order to optimize machine output in performance
- Adhered to the NASA Technical Standard 8739.4A for highly robust wiring assembly

Equipment Maintenance Technician *Jun 2018 - Feb 2021 • 1 yr 7 mos*

Tesla, Inc. [Sparks, NV] Full-time

- Identified out of spec. material condition preventing at least $1mm+ of product from fallout
- First responding problem-solver managing machine breakdowns and full recovery
- Diagnosing machine faults and laying out plan to execute repair or escalation procedure
- Troubleshooting electrical systems ranging from 24VDC to 480VAC 3-phase
- Diagnosed equipment failures and suggested improvements to process engineering
- Repaired automated machinery, requiring full knowledge of the functional operation
- Mentored production associates on equipment updates and safe throughput
- Job gap due to a one year sabbatical going to college for engineering in Oregon

Automation Technician Intern *Mar - May 2018 • 3 mos*

Andrews Cooper, Inc. [Corvallis, OR] Internship

- Fabricated complex robotic machinery and manufacturing equipment
- Wired control panels using electrical diagrams and PTC Creo Elements CAD
- Assembled and connected MIL-Spec multi-pin connectors, up to 56-pin
- Worked with procurement and parts organization for timely machine assembly

SKILLS

Computer Software:

- Component design and assembly: Autodesk AutoCAD, SolidWorks, PTC Creo, PTC Onshape
- Manufacturing: Ignition! SCADA System, Tesla MOS for NC material and production line parts
- Programming Languages: HTML/CSS/JavaScript, basic C++, Linux CLI
- Microsoft Suite: Excel Visual Basic, Visual Studio

Industrial Automation:

- Rockwell Allen-Bradley RSLogix 5000 PLC programming, wiring and troubleshooting
- FANUC America Industrial Robot: fault recovery, troubleshooting, program selection, and actuation
- Microcontrollers: Arduino, Raspberry Pi, BeagleBoard
- Pneumatic & Hydraulic assembly and schematic creation with FluidSim software
- ArcFlash rated PPE trained, LOTO/OSHA-10 experienced

Machine Shop:

- Manual vertical mill and lathe for basic parts
- MIG, TIG, & Oxy-Acetylene welding experience, Steel & Aluminum
- CNC experience with simple 6061 aluminum mountain bike parts

EDUCATION

***Associate of Applied Science*,** *2016 to 2018 • 2 Yrs.*

Industrial Automation Technology [Linn-Benton CC] GPA: 3.9/4.0

Accreditation*: Northwest Commision on Colleges and Universities*

Learned the fundamentals of electro-mechanical assembly and testing, Programmable Logic Controllers, industrial maintenance, electrical troubleshooting, hydraulic/pneumatic assembly and testing, and process-control/instrumentation.

Engineering Electives: Computer Science Orientation, Microcontrollers in Research and Design, Engineering Orientation, Preparatory Chemistry, and Introduction to AutoCAD.

PROJECTS

Please refer to kfost.com for more detailed information:

- Fully automated nutrient dosing machine for hydroponics
- Bearing supply, sorting, and placement manufacturing station
- Dual HP wafer handling automated parts transfer prototype
- Reverse engineered aluminum mountain bike frame
- Truss-style newtonian reflector telescope
